

VIKRANT KUMAR

DevOps Engineer | Payment Platform Specialist

📞 7643993774 ✉ kumarvikrant722@gmail.com 🔗 <https://www.linkedin.com/in/vikrant-kumar722/> 📍 Bangalore, India

SUMMARY

Experienced DevOps Engineer proficient in building and deploying containerized applications on AWS EKS using Docker and Kubernetes. Skilled in creating robust CI/CD workflows with Jenkins and Terraform, integrating security tools like SonarQube and Trivy to uphold software integrity. Strong foundation in Linux automation, system monitoring, and performance tuning with Prometheus and Grafana to ensure high availability and operational efficiency.

INTERNSHIP

NovaPay DevSecOps Platform

ZeTheta pvt Ltd 📅 05/2026 📍 remote

Zetheta Algorithms Private Limited is a technology platform.

- Designed and implemented an end-to-end **DevSecOps CI/CD pipeline** for a containerized payment application using **GitHub Actions, Docker, Amazon ECR, Amazon EKS, and ArgoCD** to automate secure application delivery.
- Integrated **SonarQube** for static code analysis, **Trivy** for container vulnerability assessment, and **Cosign** for container image signing and verification to strengthen software supply chain security.
- Established **GitOps-based deployment workflows** with **ArgoCD** and implemented **Argo Rollouts** to enable canary deployments, automated validation, and controlled rollback strategies.
- Managed Kubernetes workloads, including **Deployments, ReplicaSets, Services, and Ingress resources**, improving deployment reliability, release efficiency, and overall platform resilience.

Project name	Description
NovaPay DevSecOps Platform	To establish a secure, automated, and scalable software delivery pipeline by integrating security checks into every stage of the CI/CD process while enabling continuous deployment to Kubernetes environments.

NovaPay Multi-Region Resilient Architecture

ZeTheta pvt Ltd 📅 06/2026 📍 remote

Zetheta Algorithms Private Limited is a technology platform.

- Architected a **multi-region disaster recovery solution** on AWS for a payment platform to ensure **high availability, business continuity, and rapid failover** during regional outages.
- Automated infrastructure provisioning using **Terraform** and managed **Amazon EKS** environments with optimized node group scaling and networking configurations.
- Implemented **Velero** and **AWS Backup** for Kubernetes backup, restore, and recovery operations, reducing potential data loss and improving recovery readiness.
- Designed **Route 53 failover strategies** and conducted **disaster recovery testing** to validate resilience objectives and operational continuity.

Project name	Description
NovaPay Multi-Region Resilient Architecture	Provisioned resilient AWS infrastructure with automated backups, DNS failover, and disaster recovery validation across regions.

PROJECTS

End-to-End CI/CD Pipeline with Jenkins & SonarQube

📅 04/2026 📍 Location

A project to implement an end-to-end CI/CD pipeline utilizing Jenkins and SonarQube

- Engineered a Jenkins-based CI/CD pipeline integrated with GitHub and SonarQube to automate continuous integration and continuous delivery.
- Implemented Maven-based builds, automated unit testing, and SonarQube quality gates to ensure code quality and security compliance.
- Optimized pipeline execution to reduce build and deployment cycle time by approximately 90% and improved release reliability through containerized deployments using Docker.

SKILLS

AWS EC2	S3	IAM	VPC	EKS
Jenkins	GitHub Actions		Docker	Kubernetes
Terraform	Prometheus		Grafana	Trivy
SonarQube	Git	Ansible		

TRAINING / COURSES

DevOps Trainee | QSpiders

- Completed hands-on training in DevOps tools and practices including AWS, Docker, Kubernetes, Jenkins, and Terraform
- Built and deployed CI/CD pipelines using Jenkins for automated build and deployment
- Containerized applications using Docker and deployed them on Kubernetes clusters (EKS)
- Automated infrastructure provisioning using Terraform on AWS
- Implemented monitoring using Prometheus and Grafana
- Worked on real-time projects involving CI/CD, cloud deployment, and container orchestration

KEY ACHIVEMENT AND INTEREST

	CI/CD Pipeline Boost -Designed CI/CD pipelines improving deployment speed by 90% using Jenkins and Docker. -Achieved an estimated RTO of 15–30 minutes and RPO of under 15 minutes by implementing automated backups, Route 53 failover, and disaster recovery validation across AWS regions.
	INTEREST Interested in developing AI-powered agents and integrating intelligent automation into cloud-native and DevSecOps ecosystems.

EDUCATION

Bachelor of Engineering (CSE)

Visvesvaraya Technological University, Karnataka

📅 07/2019 - 08/2023
